Summary

A former advanced practice nurse with nine years of clinical experience, now working in healthcare IT to solve field problems with software. Currently based on-site at MNGHA hospitals in Saudi Arabia, carrying an infection control automation project through its full cycle, from problem definition and prototype validation to data restructuring and system launch. At the bedside I learned to connect the data around a patient to find problems before they were spoken. I build software the same way. Korean and Saudi hospitals have shown me that this approach holds across countries and cultures. I became a nurse, and left the hospital, for the same reason: to make things a little better. When the direction is clear, I find the way as I go.

Experience

Business Analyst Overseas Business (PIS) Team Jan 2026 – Present

ezCaretech • Korea's leading medical IT / EMR company • Seoul (deployed to Saudi Arabia)

- To solve the problems of infection surveillance and antimicrobial stewardship (AMS), where a small team must monitor enormous amounts of data, went directly into the workflow of infectious disease physicians at Saudi Arabia's MNGHA (national healthcare network) hospitals to find the problems and own the automation
- Built HTML MVPs quickly to address the problems found, showed them, and rapidly incorporated feedback. Built trust by working with customers to find and propose directions that solve their real problems on the clinical floor
- Took apart the medical data accumulated in the EMR, restructured it into a graph database of node-link relationships, and built the system on top of that layer
- Working beyond role boundaries: writing queries directly against the Oracle database to explore the data, and reviewing source code in collaboration with the development team

Healthcare Strategist Strategic Planning Team Sep 2024 – Oct 2025

Puzzle AI • Medical speech recognition (ambient scribing) startup • Seoul

- To solve the problem of clinicians losing much of each visit to documentation and looking at a monitor instead of the patient, planned and productized GenNote, a service that automatically writes the medical record from the doctor-patient conversation
- Built and validated MVPs quickly, and presented to about 100 clinicians nationwide at KOSMI, the Korean Society of Medical Informatics (Jan 2025), sharing the problem and helping define what STT/LLM technology should solve
- Drove pilots at several of Korea's top-5 tertiary hospitals to verify that the product actually held up in each hospital's distinct clinical workflow, coordinating clinical and technical stakeholders

Advanced Practice Nurse • Registered Nurse Oct 2015 – Sep 2024

Seoul National University Bundang Hospital (1,245 beds) • Ajou University Medical Center (1,162 beds) • Tertiary hospitals • Gyeonggi

- Cared directly for acute and critically ill patients for nine years, from the neurosurgical ICU at Ajou University Medical Center (2015–2016) to cardiothoracic surgery at Seoul National University Bundang Hospital (2017–2024). In constant communication at the bedside, combined and connected structured and unstructured data, including vital signs, lab results, medical records, patient assessments, and rounds, to find and solve problems before patients put them into words
- Worked the floor through COVID-19 and Korea's medical workforce crisis, feeling every day the many problems facing both clinicians and patients. The starting point of my career change

Education

Sungkyunkwan University, Graduate School of Clinical Nursing Science M.S., Critical Care Nurse Practitioner Feb 2022 – Aug 2025

Dongnam Health University Nursing Mar 2012 – Feb 2015

Mar 2017 – Feb 2018

Licenses & Certifications

Advanced Data Analytics Semi-Professional (ADsP) Korea Data Agency Nov 2025

NAVER Cloud Certified Professional NAVER Cloud Nov 2025

Critical Care Advanced Practice Nurse, South Korea Ministry of Health and Welfare Oct 2025

AWS Certified Cloud Practitioner Amazon Web Services May 2025

Registered Nurse, New York State NYSED Jan 2022

Registered Nurse, South Korea Ministry of Health and Welfare Jan 2015

Languages: Korean (native) • English (professional working proficiency)
